SUMMARY

Senior Flutter Developer with 8 years in mobile engineering, the last 7 focused on cross-platform Flutter. Currently building a multi-asset wealth-management fintech product for high-net-worth clients, after 4 years delivering client applications across retail point-of-sale, matrimonial, and voice-productivity domains. Shipped 15+ production applications with deep expertise in Dart, state management (BLoC, GetX, Riverpod), and native Android (Kotlin, Java) — with a proven record in performance (cold start 3.2s → 1.4s), stability (99.6% crash-free), and AI-assisted release automation.

TECHNICAL SKILLS

Languages: Dart, Kotlin, Java, Swift, SQL

Mobile Frameworks: Flutter, Native Android, iOS, platform channels, native plugin development

Architecture & State Management: BLoC, GetX, Riverpod, Provider, MVVM, Clean Architecture, modular feature packages

AI & Developer Tooling: LLM API integration, prompt engineering, custom AI agents & skills, Model Context Protocol (MCP), Claude Code, Cursor, Windsurf

Backend & Integrations: Firebase, GraphQL, REST APIs, WebSocket, Segment, Sentry, Datadog, WebEngage, Razorpay

Release & Quality: CI/CD pipelines, Shorebird OTA code push, test-driven development, unit & widget testing, App Store & Google Play release

EXPERIENCE

Keenai Global — Senior Associate, Flutter

Dec 2022 – Present

Product company — multi-asset wealth platform supporting stocks, ETFs, mutual funds, hedge funds, and structured products (Fixed Coupon Notes) across 50+ global markets, built with a MAS-licensed partner managing USD 6B+ in assets

- Rebuilt the buy/sell trade execution flow (Flutter, GetX, MVVM), increasing client trading engagement 90% by shortening the order journey and surfacing real-time order status.
- Delivered manual and SingPass digital KYC onboarding, driving a 100% increase in verified users by replacing multi-day manual identity review with a same-day automated flow.
- Cut application cold start from 3.2s to 1.4s and release build size by 22% by deferring non-critical initialization, lazy-loading feature modules, and auditing the dependency tree.
- Raised crash-free sessions to 99.6% and test coverage from zero to 78% by instrumenting Sentry, triaging the highest-volume crash clusters, and establishing the unit and widget test suite on a previously untested codebase.
- Built **PR Radar**, a CI bot that posts automated code reviews on every pull request against a codified architecture and BLoC convention playbook — catching dependency-injection, naming, and localization violations before human review.
- Built **Shipyards**, an end-to-end build and release automation pipeline that generates changelogs from commit history, moving release cadence from monthly to biweekly; integrated Shorebird OTA code push to ship critical fixes within hours instead of waiting on store review.
- Architected a full-funnel Segment event-tracking framework, giving product stakeholders conversion visibility that informed changes contributing to 80% user growth.
- Re-architected a legacy codebase into modular, layered feature packages and mentored 2 junior Flutter developers through structured code review, reducing recurring defect categories.

Dignizant Technology — Senior Flutter Developer

Mar 2021 – Nov 2022

Client services — mobile application delivery for global consumer and retail brands

- Delivered 3+ client applications in Flutter, including **Wella Professionals** and **Anuroop Wiwaha**, raising client satisfaction 80% through on-time releases and high-quality handovers.

- Engineered Flutter platform plugins bridging Dart to native Android and iOS for Elo touchscreens, Epson and Star thermal printers, MagTek card readers, Pax payment terminals, and Socket barcode/NFC scanners — unblocking hardware support for the ZuZa point-of-sale product across retail deployments.
- Scaled Anuroop Wiwaha, a matrimonial platform with real-time chat and advanced matchmaking search, to 200% user growth and a 4.5+ app-store rating by optimizing list rendering and Razorpay payment flows.
- Took iOS Spotlight search and Google Assistant voice actions for Carbon Voice from proof of concept to production, enabling voice-driven capture and improving application discoverability.

Cubes Infotech — Android & Flutter Developer

Aug 2019 – Mar 2021

Client services — multi-client Android and Flutter delivery

- Delivered 7+ Android and Flutter applications end to end for 5+ clients, owning requirement analysis, development, and App Store and Google Play release.
- Profiled and removed render and memory bottlenecks across production applications, reducing crash rates and startup time.

D&K Group — Android Developer

Jul 2018 – Aug 2019

Client services — native Android application delivery

- Built and shipped native Android features in Java across multiple client applications, managing Google Play releases and store compliance reviews.

SELECTED PROJECTS

- **Keenai Wealth** · *Wealth & investment* — Investment platform for high-net-worth clients spanning stocks, ETFs, mutual funds, hedge funds, and Fixed Coupon Notes (FCNs), with SingPass KYC onboarding, portfolio tracking, and push notifications. Flutter, GetX, MVVM, AWS, Segment, Sentry, WebEngage. [App Store](#) · [Google Play](#)
- **Anuroop Wiwaha** · *Matrimonial platform* — Top-rated matrimonial platform for the Marathi and Gujarati communities, featuring advanced matchmaking search, interest workflows, and real-time chat. Flutter, Provider, Firebase, Razorpay, Datadog, WebSocket. [App Store](#) · [Google Play](#)
- **ZuZa** · *Retail point-of-sale* — POS platform for offline retail with inventory, customer, and order management, white-label theming, multi-location support, and a native plugin layer for payment terminals, printers, and scanners. Flutter, BLoC, platform channels, TDD. [Demo](#)
- **Carbon Voice** · *Voice productivity* — Voice-first capture application converting spoken conversations into shareable documents, with real-time audio messaging and system-level voice search integration. Flutter, GetX, WebSocket, Firebase, in-app purchase. [App Store](#) · [Google Play](#)
- **Octopod** · *Education platform* — Learning platform connecting learners, educators, payors, and administrators, with courses, video lessons, quizzes, assignments, socket-based real-time chat, payments, scheduling, and progress reporting. Flutter, BLoC, WebSocket, TDD. [App Store](#) · [Google Play](#)

EDUCATION

Master of Computer Applications — Suresh Gyan Vihar University · CGPA 8.2/10

Aug 2019

Bachelor of Computer Applications — Sutex Bank College of Computer Applications and Science

Aug 2017
